GTS-802A Robotic / GTS-3C Total Stations

Comments: **Bill Lulay, Professional Engineer and Professional Land Surveyor** on **NSP's** staff, facilitates extended control over their projects. **Lulay outlined his work philosophy:** *"We do a lot of turnkey projects - from bare property, thru approval, design, and construction - turn it over to the Owner with the plat. We like it because there's not a middle guy in there. If there's a change, you don't have to call the engineer up. The guy running the job is the engineer. It streamlines things a lot."*

Lulay commented about **Topcon's HiPer Lite+ survey system:** *"It's really worked out well for us. One guy can do what two guys used to do. Last year we had a site with a **50-foot grade change** from top to bottom **and obstructions** that a conventional gun couldn't see through. **The HiPer Lite+ worked slick as a whistle for us.**"*

By: Bill Lulay
Position: P.E., P.L.S.

NSP's Office in Stayton, Oregon

Matt Brockamp, Surveyor / Staker for NSP, staking curb & catch basins at Illahe Heights

Even Under Trees...

Boundary corners aren't always in the open. **Matt and Dave Brockamp** check one of their reference points with **Topcon's HiPer Lite+ GPS survey system.**
